

Additions to TCATA's RFP Specifications for Phone System

June 6, 2018

As a follow-up to the RFP for Acquisition of a Turnkey Internally Hosted Pre-programmed Phone System, following is additional information that is being added amending or clarifying to insure that everyone is responding to the same requests:

1. At latest count there is currently a total of 15 phones including one in the mechanical room which will be retained and need to be part of the system.
2. We will need to add two additional cable runs for the front lobby where TCATA expects to establish two work cubicles.
3. We currently have two dedicated phones out stationed at Meijer's and at Lakeland Hospital that are set up to ring directly to our dispatch center that are leased from Comcast and show on our bill as Mobility Voice Lines. Our RFP seeks to have the ability to have up to 8 of these including these two.
4. External Page/Public Address System – I want the ability to page the outer garage area from my office
 - a. System should consist of dedicated hardware – amplifiers -speakers
 - b. Speaker quantity should be of a type and number to have adequate coverage of the maintenance areas and/or office areas as required
 - c. Amplifiers should be of sufficient wattage to support quantity of system speakers
 - d. System should support interfacing to TDM digital or VOIP telecommunications systems with vender supplying all interface hardware.

Alex Little, Executive Director
